Methods Which Show Best Results. In the course of the Department experiments the writer discovered that by the use of a method of attaching buds described in the seventeenth century the finer varieties of the mango, with skillful handling, may be propagated quite as easily as the peach or other fruit tree. Applying The Buds. Two or three-year-old seedlings and moderate-sized trees may be used as stocks on which to bud approved varieties of the mango. The stems selected for the reception of the buds should be at least an inch in thickness. When of this diameter, both wood and bark are thoroughly ripe, and the union of the scion with the stock will be easily accomplished if the operation of inserting the buds is performed carefully. The method of budding which has been found to work most satisfactorily (Pl. II, fig. 1) consists in removing a rectangular piece of bark from the stock and inserting a piece similar in shape and a trifle larger in size, having a bud in the center, from a branch of a desirable variety. This method of budding was described by Robert Sharrock in his History of the Propagation and Improvement of Vegetables, published in 1672. The only departure from Sharrock s method of budding as used in the case of the mango at the present time is that the bud, instead...
